PROFESSIONAL SUMMARY

Full-stack developer experienced in building end-to-end React + FastAPI systems — from real-time GPS tracking to AI-powered document pipelines and secure Linux infrastructure.

EDUCATION

Rajalakshmi Institute of Technology (RIT Chennai) — Anna University, R2023
B.Tech. Computer Science and Business Systems (CSBS), 2nd Year | **CGPA: 7.82/10**

TECHNICAL SKILLS

Full-Stack: React, FastAPI

AI Integration: REST API integration with LLM/vision providers (NVIDIA NIM), vector embeddings

Languages: Python, JavaScript, SQL

Frameworks/Libraries: React, FastAPI, Flask, React Native (Expo)

Databases: MySQL, SQLite, Supabase (pgvector)

Tools & Platforms: Git, Virtual Machines, Termux, Kali NetHunter, Tailscale, Cloudflare Tunnels, nginx

Concepts: REST APIs, WebSockets, System Design, Basic Cybersecurity (OverTheWire Bandit, in progress)

PROJECTS

DigiLand – Land Record Digitization & Audit Platform | *React, FastAPI, SQLite, PaddleOCR, SHA-256 Ledger* | *SIH 2026*

- Built a full-stack GovTech platform end-to-end — React split-view verification UI, FastAPI + SQLAlchemy backend, and a SHA-256-linked audit ledger for data integrity
- Designed OCR/deduplication REST APIs with multilingual OCR (10 languages) and cadastral GIS mapping

DocVault AI – Smart Document Vault & Academic Hub | *React, FastAPI, Supabase (pgvector), NVIDIA NIM*

- Built the full stack solo: React frontend, FastAPI backend, and Supabase/pgvector layer powering AI-driven document classification and vector search
- Implemented secure PIN-based auth (PBKDF2-HMAC-SHA256) and a fully offline deterministic fallback mode requiring no external API keys

Bus Tracker – Real-Time Campus Transit System | *React, FastAPI, SQLite, WebSockets, Leaflet.js + OSRM* | *Winner, Freshathon 2.0*

- Delivered a complete full-stack product across three user roles (student, driver, admin), with WebSocket-based real-time sync between frontend map and backend GPS feed
- Audited and fixed backend auth gaps, database contention, and a broken SOS feature; later adapted into MSME MATE for AppleXfest with idle-time/fuel-waste detection

HACKATHONS & COMPETITIONS

Freshathon 2.0 — Winner — Built Bus Tracker, a real-time campus transit tracking system

Smart India Hackathon (SIH) 2026 — Built DigiLand, a full-stack land-record digitization platform, for Problem Statement 26018

AppleXfest Hackathon — Built MSME MATE, an MSME-focused transport optimization tool adapted from Bus Tracker

ACHIEVEMENTS & CERTIFICATIONS

- Winner, Freshathon 2.0 Hackathon — Bus Tracker
- NPTEL — The Joy of Computing using Python

LEADERSHIP & EXTRACURRICULARS

- Team Lead across multiple hackathons
- Volunteered at various college events
